RENNIE'S BULBS

W^M RENNIE CO LIMITED

TORONTO, MONTREAL, WINNIPEG, VANCOUVER.

Rennie's Annual Catalogue of FLOWER BULBS FOR FALL AUTUMN, 1913

TO BLOOM IN THE HOUSE THIS WINTER OR IN THE GARDEN NEXT SPRING

TIME OF PLANTING.—To the beginner we would particularly emphasize the fact that NOW and not SPRING-TIME is the time to plant all kinds of spring flowering bulbs. The larger part of the bulbs offered in this catalogue reach us from Holland early in September, and the sooner they are planted after that the greater will be the measure of success; therefore ORDER EARLY.

WHEN SHIPMENTS CAN BE MADE.

The general line of bulbs will be ready for shipment in September. A few kinds (chiefly Roots and Lilies) are not ready for shipment before November, as they are not matured enough to take up before that time. Therefore please note that all general orders will be shipped as soon as received in September, and the balance will be forwarded as early in November as possible.

BULBS BY MAIL OR EXPRESS.—All bulbs herein quoted will be sent to any post office in Canada, prepaid, when ordered at printed prices, except where noted. Postage to Newfoundland—12 cents per lb., or fraction thereof, must accompany all orders, otherwise it will be deducted.

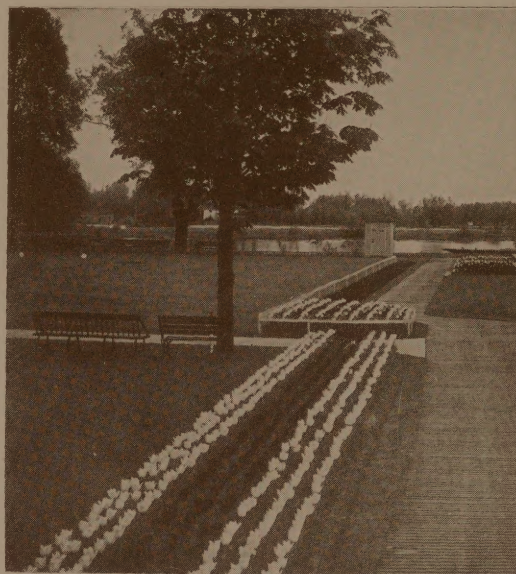

ORDERS.—All orders are filled in rotation as received. We would advise early orders to ensure their being filled complete, as later in the season some varieties become exhausted, when we must reserve the privilege of supplying another sort as near the color as possible, but shall always substitute an equal if not better variety than ordered.

REMITTANCE.—All orders must be accompanied with the cash for full amount of order, which may be sent by Registered Letter, P.O. Order, Postal Note or Express Order.

ADDRESSES.—Please be careful and write your Name, Post Office and Province plainly, that there may be no disappointment by orders being incorrectly sent.

OUR SPRING CATALOGUE FOR 1914

Will be ready in December, and will contain, in addition to a very complete list of all the best standard Flower and Vegetable Seeds, Garden Tools, Farm Seeds, Fertilizers, etc., a number of the choicest novelties tested by us the past season. A copy will be sent to all our regular customers. We shall be pleased to mail one to your friends who purchase seeds and plants by mail.

EARLY ROMAN HYACINTHS

(FRENCH).—A charming class, specially adapted for forcing and house culture, each bulb producing several graceful spikes of delicately perfumed flowers. They may be had in bloom from November till spring, by early and successive plantings. Bulbs may be planted close together, and, in pots and pans of six or more bulbs, are very effective. They are not considered hardy enough for open ground.

SPECIAL OFFER.

4. One Bulb each above 3 Colors for 15c., 3 Bulbs of each for..... 40c.

DUTCH ROMAN HYACINTHS

ALSO CALLED MINIATURE HYACINTHS.

5. These Hyacinths are excellent for growing in pots, pans or boxes; they bloom very freely, often producing 3 or 4 spikes. They are equally desirable for culture outdoors; they should be planted closer together than the "Dutch Hyacinths." Culture is the same as recommended for the Roman Hyacinths, and they come into bloom after the Roman Hyacinths are exhausted. The flowers are pink, white and light blue in various shades. 5c. each, 40c. doz., per 100 \$2.50, Postpaid.

GRAPE HYACINTHS

6. One of the prettiest of early spring flowering bulbs, growing about 6 inches high and throwing up numerous spikes of clear blue or white flowers, which resemble a miniature bunch of grapes. They are hardy, and once planted take care of themselves; in clumps or lines they are very effective. 8 to 12 bulbs in a 6-inch pan make a pretty plant for window decoration, blooming at Easter. Mixed Colors.—4 for 10c., doz. 20c., per 100 \$1.00, Postpaid.

CROCUS

Crocuses are among the earliest of spring flowers, and are most effective when planted under the sod about the lawn.

They can be strewn thickly over the surface and should be planted just as they fall, merely lifting the sod with a knife or trowel, slipping the bulbs underneath and pressing the sod back into place. Planted in this way they will live for years, and are always a most welcome harbinger of spring. They can also be used in design beds, in which case none but the named varieties should be planted. Prices include postage, except 1,000 lots.

MAMMOTH CROCUS

MAMMOTH-FLOWERING NAMED VARIETIES.

These are large, selected bulbs of the best varieties, and are noted for the immense size and quantity of their flowers and richness of color. The small, cheap bulbs we do not handle, as they fail to give satisfaction.

RENNIE'S BEST HYACINTHS

EXTRA SELECTED FIRST-SIZE NAMED BULBS.

We recommend this size especially for show and exhibition purposes and where the finest results are desired. They are all extra-selected bulbs of the largest size and of the best varieties, and have won first prizes wherever exhibited.

HOW TO GROW HYACINTHS SUCCESSFULLY IN GLASSES AND POTS

POT CULTURE.—Plantings may be made at any time from September to December, though October is the best time. A light, rich soil with a mixture of well-rotted cow or sheep manure is most suitable. Use a four or five-inch pot, and have the top of the bulb just above the surface. After potting, give a good watering and set away in a cool cellar or outhouse and cover over with coal ashes or some litter until thoroughly rooted; they may then be brought as wanted for a succession of flowers into a moderately warm, light room.

CULTURE IN GLASSES.—When it is desired to grow Hyacinths in water, they should be placed so that the base of the bulb merely touches the water. The glasses should then be set in a cool, dark closet, or in the cellar, until filled with roots, when they may be brought into the light. Give as much fresh air as possible without letting the plants stand in a draught, and as nearly as possible at a temperature of sixty degrees.

**GROWING HYACINTHS OUTDOORS**

The bulbs may be planted any time from October to December—the earlier the better. They succeed in any good, well-drained garden soil. Set the bulbs so that the tops will be 3 or 4 inches below the surface and 6 to 10 inches apart. Before very severe weather comes on, cover the beds with straw, leaves or manure to protect them from the frost, but care should be taken that this covering is not too thick, as the bulbs are as likely to be injured by being kept too warm as by freezing. The mulching should be removed in March.

RENNIE'S CHOICE DUTCH HYACINTHS

In Separate Colors, for Bedding-Out or Forcing.

Good sized flowering bulbs, 15 centimeters ($5\frac{1}{4}$ in. and upwards in circumference), much larger than the Mixed Hyacinth bulbs usually sent out. They are well adapted for open-ground planting, in mixed borders and informal beds, and on account of their low price are also extensively forced for winter blooming and cutting. The list offered below includes nearly every shade of red, white, blue, yellow, etc.

RENNIE'S SPECIAL NAMED HYACINTHS**FOR BEDDING OR FORCING.**

These are **Second Size Named Hyacinths**, and are larger sized bulbs than usually put in our unnamed separate colors. They will produce fine spikes of bloom, and the different sorts as offered, being of one shade of color, render them of value for bedding in designs, enabling one to obtain the exact color effect desired. For growing in pots indoors they are second only to our Best Named Hyacinths offered on page 2.

SINGLE EARLY TULIPS

Tulips are universal favorites, and their ease of culture, combined with beauty of form and gorgeous coloring, renders them the most popular bulbs grown for spring bedding, and for winter flowering in the greenhouse and window garden they are incomparable.

For cultural directions see our pamphlet, "How to Grow Bulbs," free with every order.

The letters A, B, C, preceding the varieties, indicate their earliness of bloom. The A's flower together and are the earliest, B next, etc. The average height in inches is also given to aid in arranging flower beds. ORDER BY NUMBER.

When Tulips priced by the 100 are wanted sent by mail, add 25c. for Postage on each 100.

DEPTHS AT WHICH BULBS SHOULD BE PLANTED.

This diagram conveys the information much more clearly and briefly than we could describe it. Outdoor planting should be done early in the fall to secure healthy plants, vigorous foliage and beautiful flowers.

DOUBLE TULIP

We Supply First-Class Bulbs only and will not change Our Quality to compete with Low Prices.

DOUBLE EARLY TULIPS

While not equal to the single in brilliancy, the double varieties last much longer in bloom. The early varieties, such as Murillo, Imperator Rubrorum and the Tournesoll, are excellent for forcing. The later sorts will not bear forcing, but are very effective in beds or borders. A combination or solid bed of the pure white and bright scarlet varieties, La Candeur and Rex Rubrorum, is especially effective. The average height of each in inches is prefixed, and the letters A, B, C, preceding the varieties, indicate their earliness of bloom.

DARWIN TULIPS—CLARA BUTT

GIANT DARWIN TULIPS

These gorgeous new late or May-flowering Tulips are very stately and beautiful—producing immense flowers on tall sturdy stems attaining a height of from two to three feet. The flowers are models of perfection in form, lasting wax-like substance—and in a great variety of both dainty and richly brilliant colorings. The Darwin Tulips are exceedingly effective when grown in groups of one variety in the garden or herbaceous border. As cut flowers they are unsurpassable. They may be forced if brought into the heat not earlier than January.

Narcissus or Daffodils

These flowers, so well adapted to the hardy border, are much admired by all friends of hardy flowers, and are found most useful for planting among hardy perennials and shrubbery as well as in solid beds and borders. They are equally valuable for growing in pots and pans for house decoration, as they are easily grown and make a splendid show. Culture.—Same as for Hyacinths. The Polyanthus varieties are not hardy enough for our climate and should be grown in the house only.

Two Magnificent Bulbs for Growing in Water

CHINESE SACRED LILIES

The Celestials grow their famous "Joss Flower" in bowls of water. The bulbs should be surrounded with pebbles to keep them from toppling over when in flower, and then water enough put in to cover about one-half of the bulb; place them in a dark, cool closet for a couple of weeks to become rooted, and then bring into the light. They flower in clusters, with large waxy-white blooms with yellow centre; very fragrant. Slits one-fourth inch deep up and down the sides of the bulbs near the top will aid the weak shoots to burst through the tough outer skin

200. **LARGE SELECTED BULBS.**—Each 10c., doz. \$1.10, postpaid; original baskets containing 30 bulbs, \$1.50 per basket, (doz. 75c.) by express or freight at purchaser's expense.

GIANT "PAPER-WHITE" NARCISSUS

201. These beautiful, graceful Narcissus will flower as early as Christmas, and are the best of all the European bulbs for growing in water. The flower is whiter than that of the Chinese Sacred Lily. We offer mammoth bulbs of these, imported especially which are equally good for growing in earth. Grown in bowls of water like the Chinese Lilies, it should flower in from six to eight weeks. Planted in earth, use 6 or 8 bulbs in an 8-inch pan, which started in September will flower by Christmas. In planting from week to week, a succession of bloom can be had from early December to March. Each 6c., postpaid; doz. 60c.; if by post add 10c. per doz. 100 \$3.25; postpaid, \$4.00.

CHINESE SACRED LILY

AMARYLLIS

On receipt of the bulbs in the autumn they should be placed where they will be always slightly moist and warm, under the benches of a greenhouse, for example; do not pot up the bulbs before the flower-buds appear; when first potted give very little water, and promote growth by giving moderate bottom heat; increase the supply of water as the plants progress.
